CONTOPP®

Duremit 50 Article number: 20.302

Technical Leafleat

Funktion

- Production of high-strength cement screeds up to quality class C45.
- Favourable processing and smoothing properties thanks to the plasticing components

Application area

- For producing highly stressed, cement-bonded utility screeds
- For producing high-strength industrial screeds
- For producing screeds with hard granular surfacing

Data

Colour: brown liquid Form:

 $1.16 \pm 0.02 \text{ g/ml}$ Density (20 °C):

Processing temperature:

as of + 5 °C Shelf life:

Supply form:

c. 12 months – protect from frost and direct sunlight PVC can: 35 kg net

240 kg net Poly drum: 1.200 kg net Container:

Mix

| Recipe per mix | Standard | CONTOPP® | Unit |
|--------------------|-------------|-------------|------|
| Cement | 63 | 63 | kg |
| Sand 0/4 1) | 300 | 300 | kg |
| CONTOPP Duremit 50 | _ | 1,12) | ltr. |
| w/c ratio | 0.70 - 0.80 | 0.40 - 0.50 | |

Strength

| Criteria | Standard | CONTOPP® | Unit |
|-------------------------------|----------|----------|-------------------|
| Strength in flexure (28 days) | F5 | F7 | N/mm ² |
| Comp. strength (28 days) | C35 | C45 | N/mm ² |

1) according to BS EN 13139 2) corresponds to 2,0 M-% of the cement weight.

This ideal screed mortar can <u>only</u> be produced whilst adhering to the processing information listed below.

Basic materials

- CEM I 32.5 R or CEM II (A-types recommended) 32.5 R in accordance with BS EN 197.
 Sand 0/4 in accordance with BS EN 13139.

Stick to the dosage (1.1 l per 63 kgs CEM or 0.9 l per 50 kgs CEM).

• The additive is added to the moistened mix.

- w/c ratio < 0.50
- Increased water saving must be taken into consideration!
 Mix for at least 2 minutes after adding all the components.

Construction site conditions

- Protect from draughts and direct sunlight during setting.
- Remove surplus moisture by means of draught-free ventilation (natural ventilation).
 Nature of construction and construction site preparation following BS 8204-1 and 8000.

Assessing ready-to-lay

- Prior to laying the top flooring, the residual moisture of the screed must be measured by the person laying the floor.
- Whilst adhering to all the manufacturer's details, BS 8203 recommends laying the screed under 75 % relative humidity.

TECHNICAL DATA

CHARACTERISTICS

PROCESSING INFORMATION

Bonded screeds

Use epoxi-bonding agent SYSTOPP Colerit EH-2 for strength classes above CT-C30-F5 and lay screed wet on wet prior to the onset of the drying process of the bonding agent.

SPECIAL ADVISES

Safety

- Always observe general work hygiene when using our products.
- CONTOPP® hardeners are solvent-free, chloride-free and safe in terms of organic architecture
- Our products do not deteriorate when stored properly (see data).
 Therefore, the stability and reactivity is not affected by storage up to 12 months.
- You can find out more information on handling CONTOPP® hardeners from our safety data sheets.

Standards and testing regulations

- BS 8203: Installation of resilient floor coverings
 BS 8204 to sit floorings
- BS 8204: In-situ floorings bases and screeds
 BS 8000: Code of practice for cement/sand floor screeds and concrete floor toppings

Comments

The raw materials we process and the products we produce are subject to strict factory inspections. Do not use additives from other manufacturers when using this product. It is stressed that our products and the procedure must be tested for suitability for the expected construction site conditions.

As we have no control over construction site conditions or the execution of the work, we cannot be held legally liable as a result of the information included in this leaflet. Upon the publication of this leaflet all other previous copies shall become invalid.
